EDUCATION

1993 Ph.D. Dept. of Geosciences, National Taiwan Univ., Taiwan ROC

1988 M.S. Dept. of Geosciences, National Taiwan Univ., Taiwan ROC

1984 B.A. Dept. of Geosciences, National Taiwan Univ., Taiwan ROC

EMPLOYMENT

2020/01 – present	Director	RCEC, Academia Sinica, Taiwan ROC
2019/06 – present	Distinguished Research Fellow	RCEC, Academia Sinica, Taiwan ROC
2018/08 – present	Executive Secretary	Center for Sustainability Science, Academia Sinica, Taiwan ROC
2018/06 – present	Joint Appointment Research Fellow	Inst. of Earth Sciences, Academia Sinica, Taiwan ROC
2019/06 – present	Joint Appointment Professor	Dept. of Geosciences, National Taiwan University, Taiwan ROC
2012/08 – 2019/05	Distinguished Professor	Dept. of Geosciences, National Taiwan University, Taiwan ROC
2017/01 – 2020/03	Visiting Professor	Earth Observatory Singapore, Nanyang Technology Univ., Singapore
2014/03 – 2016/07	Director General	Dept. of Natural Sciences and Sustainable Development, Ministry of Science and Technology, Taiwan ROC
2012/08 – 2014/02	Director General	Dept. of Natural Sciences, National Science Council, Taiwan ROC
2011/08 – 2012/07	Chairperson	Dept. of Geosciences, National Taiwan University, Taiwan ROC
2003 – 2012/07	Professor	Dept. of Geosciences, National Taiwan University, Taiwan ROC
1997 – 2003	Associate Professor	Dept. of Geosciences, National Taiwan University, Taiwan ROC

HONORS & AWARDS

- Outstanding Research Awards of National Science Council, ROC, 2011-2014
Outstanding Research Awards of National Science Council, ROC, 2003-2006
Annual Research Awards of National Science Council, ROC, 1995, 1996, 1997, 1999, 2000
Award for Young Scientist, College of Science, NTU, 2002
Outstanding Teaching Award of National Taiwan Univ., 1999, 2003, 2009
Geological Society America (GSA) Fellow elected in 2008
Merit Research Fellow, Ministry of Science and Technology, 2022

PROFESSIONAL SERVICE

- 2017- : Member, Regional Advisory Committee, AOGS
- 2017- : Member, Publication Committee, AOGS
- 2017- : Member, National Committee of Future Earth, Taipei
- 2016- : Coordinator, Thematic Program Office for Collaboration Research Action: Disaster Risk Reduction and Resilience, Belmont Forum
- 2016- : Council member, Chinese Taipei Geophysical Society

RESEARCH INTEREST (10 ~ 15 lines ; 內容同時呈現於 RCEC 網頁個人介紹頁)

- (1) Paleoclimate and environmental changes by isotope geochemistry;
- (2) Earth systems and sustainability sciences;
- (3) Geochronology developments and their applications;
- (4) Kinematics of seismogenic faults and seismic hazard mitigation.

RESEARCH HIGHLIGHTS (同時呈現於 RCEC 網頁；簡述近期重要研究，每則 5~10 lines)

1. Precipitation response to Heinrich Event-3 in the northern Indochina as revealed in a high-resolution speleothem record

The Heinrich Event (HE), a millennial-scale cold event in the North Atlantic, is characterized by the occurrence of a large amount of coarse terrigenous grains in marine sediments. There are 7 HEs in the past 70 thousand years (HE-6 to HE-0). Among HEs, HE-3 and HE-6 have been categorized as unusual events due to lower proportions of lithic grains found in their corresponding sedimentary layers. In tropical Asia, HE-3 manifestations prominently appear in proxy records from China, Myanmar, northern Borneo, and India. It supports the climatic link between the low latitudes and the North Atlantic. However, the mechanism remains challenging because monsoon intensity may respond to HEs in different magnitudes.

Here, we report a new dataset of speleothem $\delta^{18}\text{O}$ from northwestern Vietnam, which covers the duration of the HE-3 with decadal scale resolution. The $\delta^{18}\text{O}$ data implies a pronounced excursion in precipitation beginning at around 30.8 thousand years ago (ka), reaching the minimum at 30.3 ka, and then turning to increase in precipitation at 30.2 ka, and finally returning to a higher level at 29.5 ka. It shows a gradual, discontinuous onset and termination of altered

conditions with steps inferred to be on the order of several hundred years. This contrasts to the abrupt HE-3 onset and termination observed by previous studies in Asian monsoon region.

We used a coupled slab ocean model (CAM3) to evaluate effects of different degrees of cooling associated with glacial boundary conditions. Magnitudes of cooling ranged from 6 °C and 10 °C (low and high scenarios respectively) around the British Isles relative to the control simulation. The simulated summer (June-July-August) precipitation near northwestern Vietnam presents an ~10% decline which resulted from a southward shift of Indian Ocean's warm pool and summer ITCZ by the cooling in the North Atlantic. (Nguyen et al. 2022)

2. Synorogenic extension and extrusion in southern Taiwan

Extensional deformation is documented in many contractional orogenic belts, which are characterized by high topography, thickened crust, and synorogenic extensional structures at high elevations or on steep topographic slopes. The direction of extension is generally perpendicular or parallel to the orogen. In southern Taiwan, those high rocks in the core of the orogenic belt are dominated by the extension, whereas the lower is dominated by the contraction. In contrast, the mountain heights and crust thickness in southern Taiwan are lower and thinner than in those classic orogens. In addition, the direction of extension is oblique to the orogen rather than orthogonal or parallel to the orogen. These observations suggest a more complicated tectonic process may be responsible for the extension in the core of southern Taiwan. This study integrates late-stage structures and their paleostress inversion, with GPS and earthquake focal mechanisms to assess different hypotheses for the origin of synorogenic normal faults in the study area. This study further proposes a southwestward extrusion model in which the lateral and vertical movement of the lower crust in southern Taiwan accommodates the shortening between the obliquely colliding Peikang High and the Luzon Arc. The northeast extension normal faults in the upper crust can be interpreted as to accommodate the lateral and vertical movement of the lower crust in the southern Central Range. This study infers that this southwestward extrusion process may be younger the 0.5 Ma based on thermochronological result and the proposed onset of extrusion in southwest Taiwan is late Pleistocene. (Hsu et al. 2022)
